CSE 222/505 - Spring 2020
Homework #1 Part2 Report

Harun ALBAYRAK
171044014

1-SYSTEM REQUIREMENTS

The software is developed on IntelliJ Idea platform and can be executed on this platform but since the software is Java-based, it can be executed on any system Java JDK 8 or more installed.

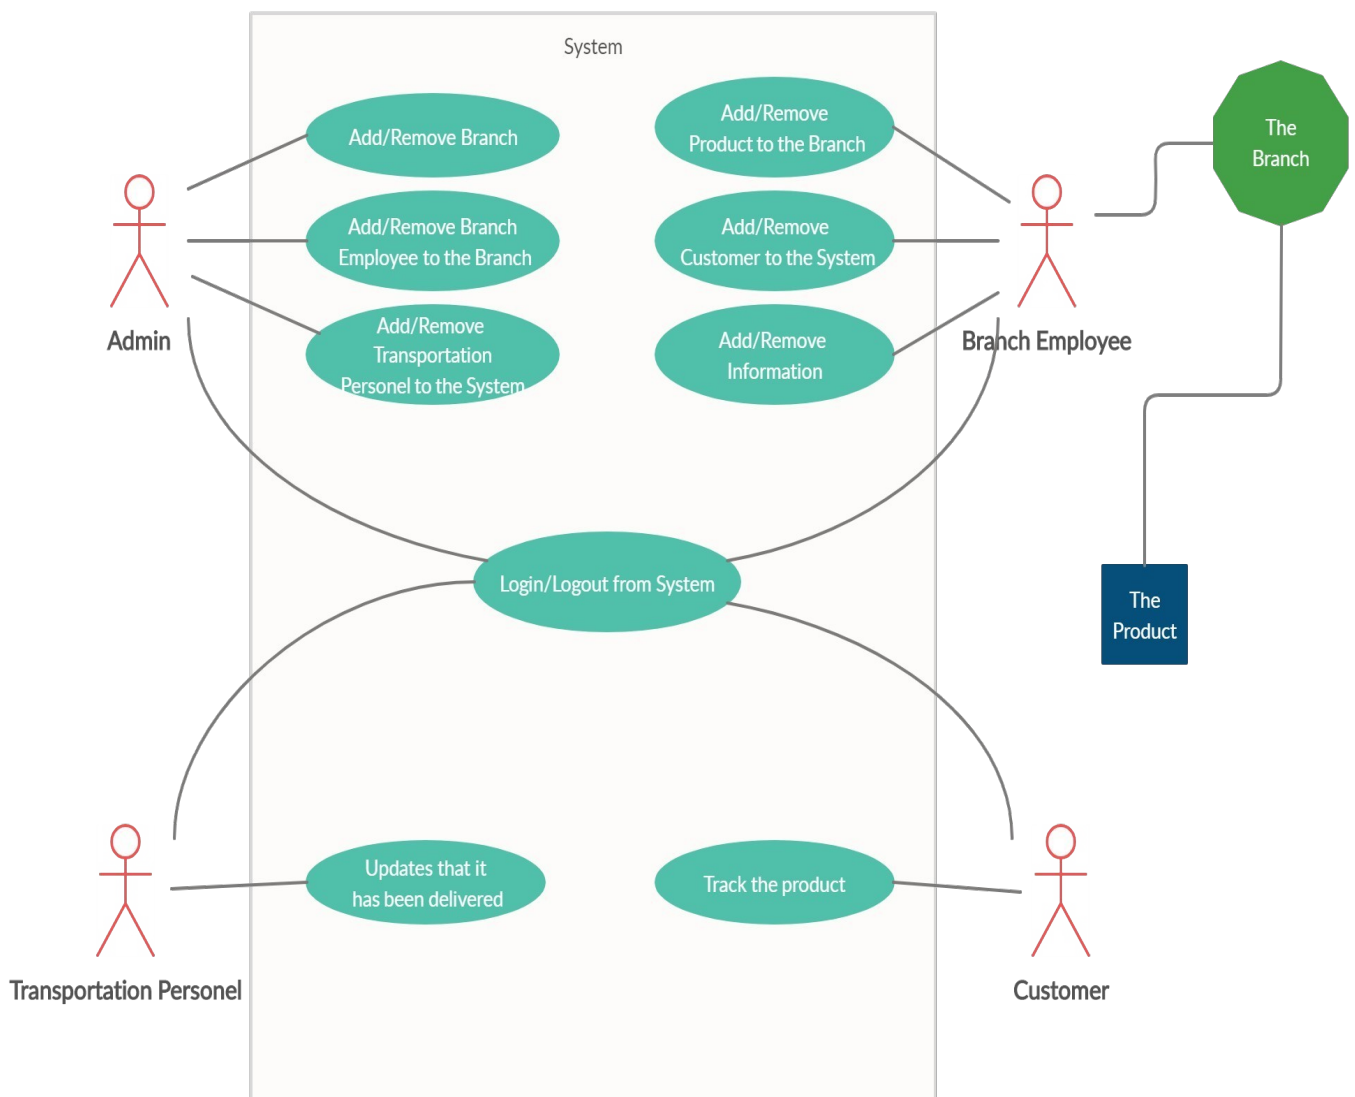

For IntelliJ Idea:

2 GB RAM minimum, 8 GB RAM recommended

3 GB hard disk space, SSD recommended

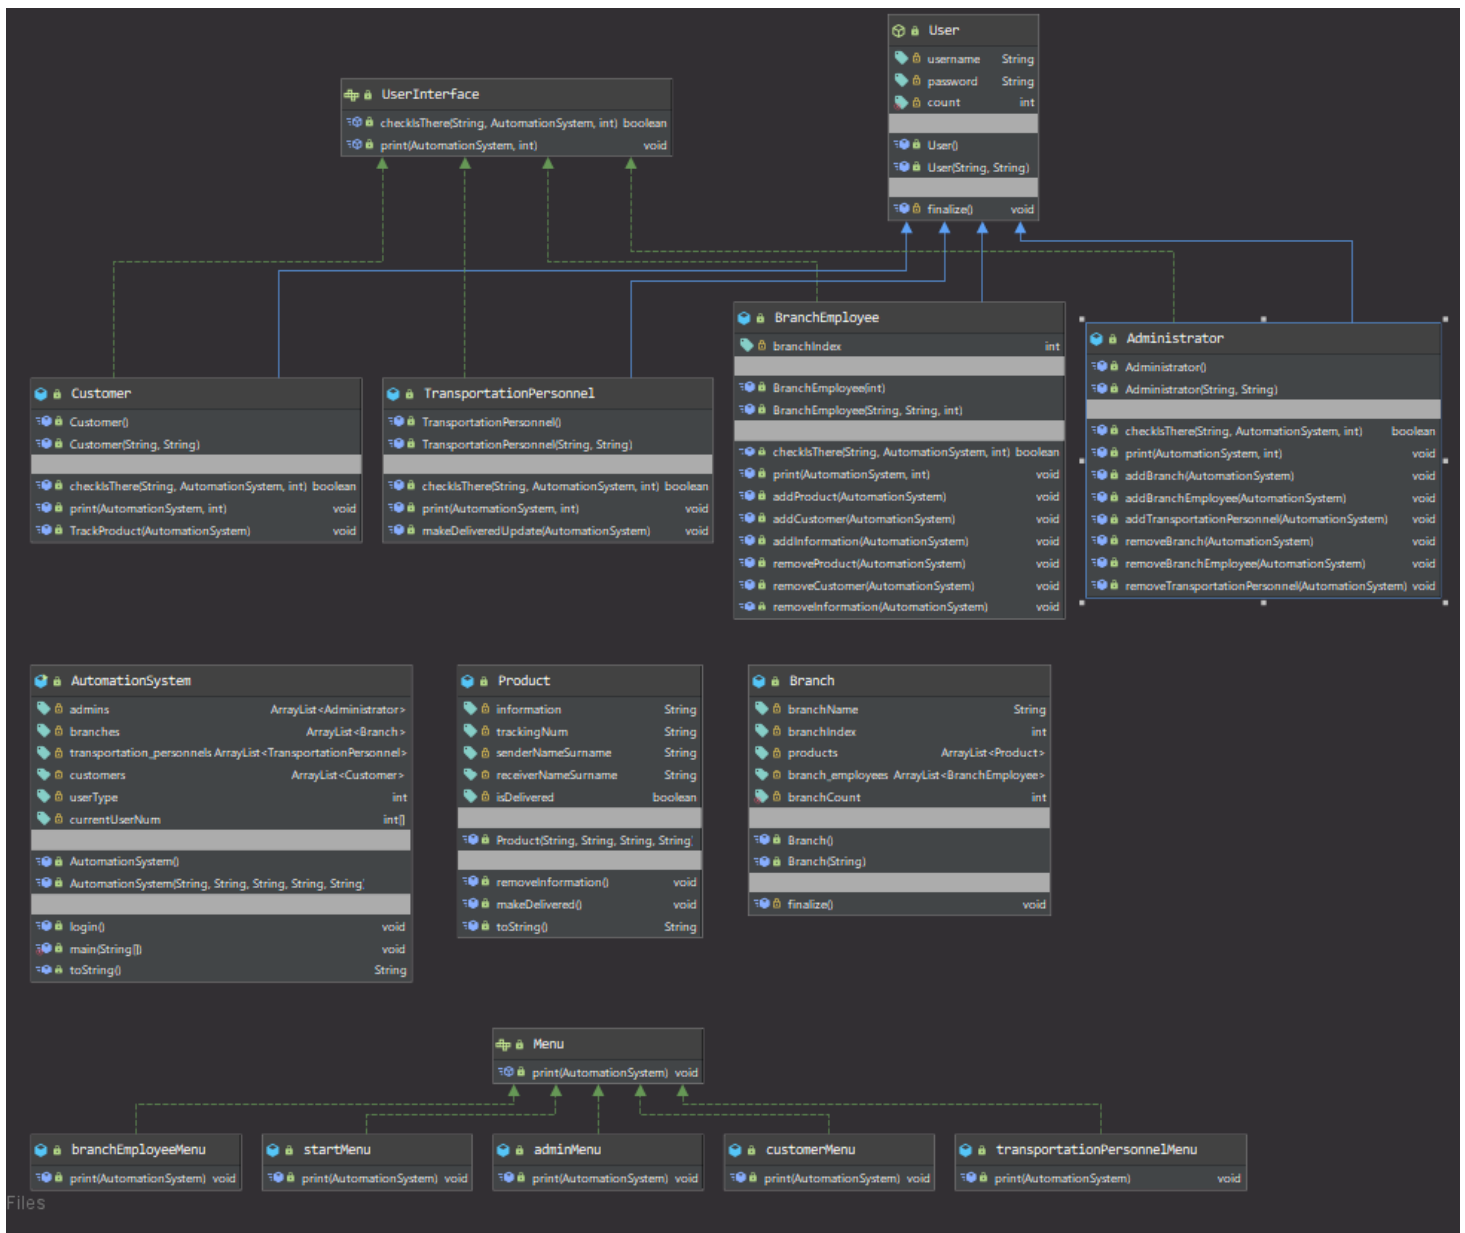

1024x768 minimum screen resolution

2-USE CASE DIAGRAMS

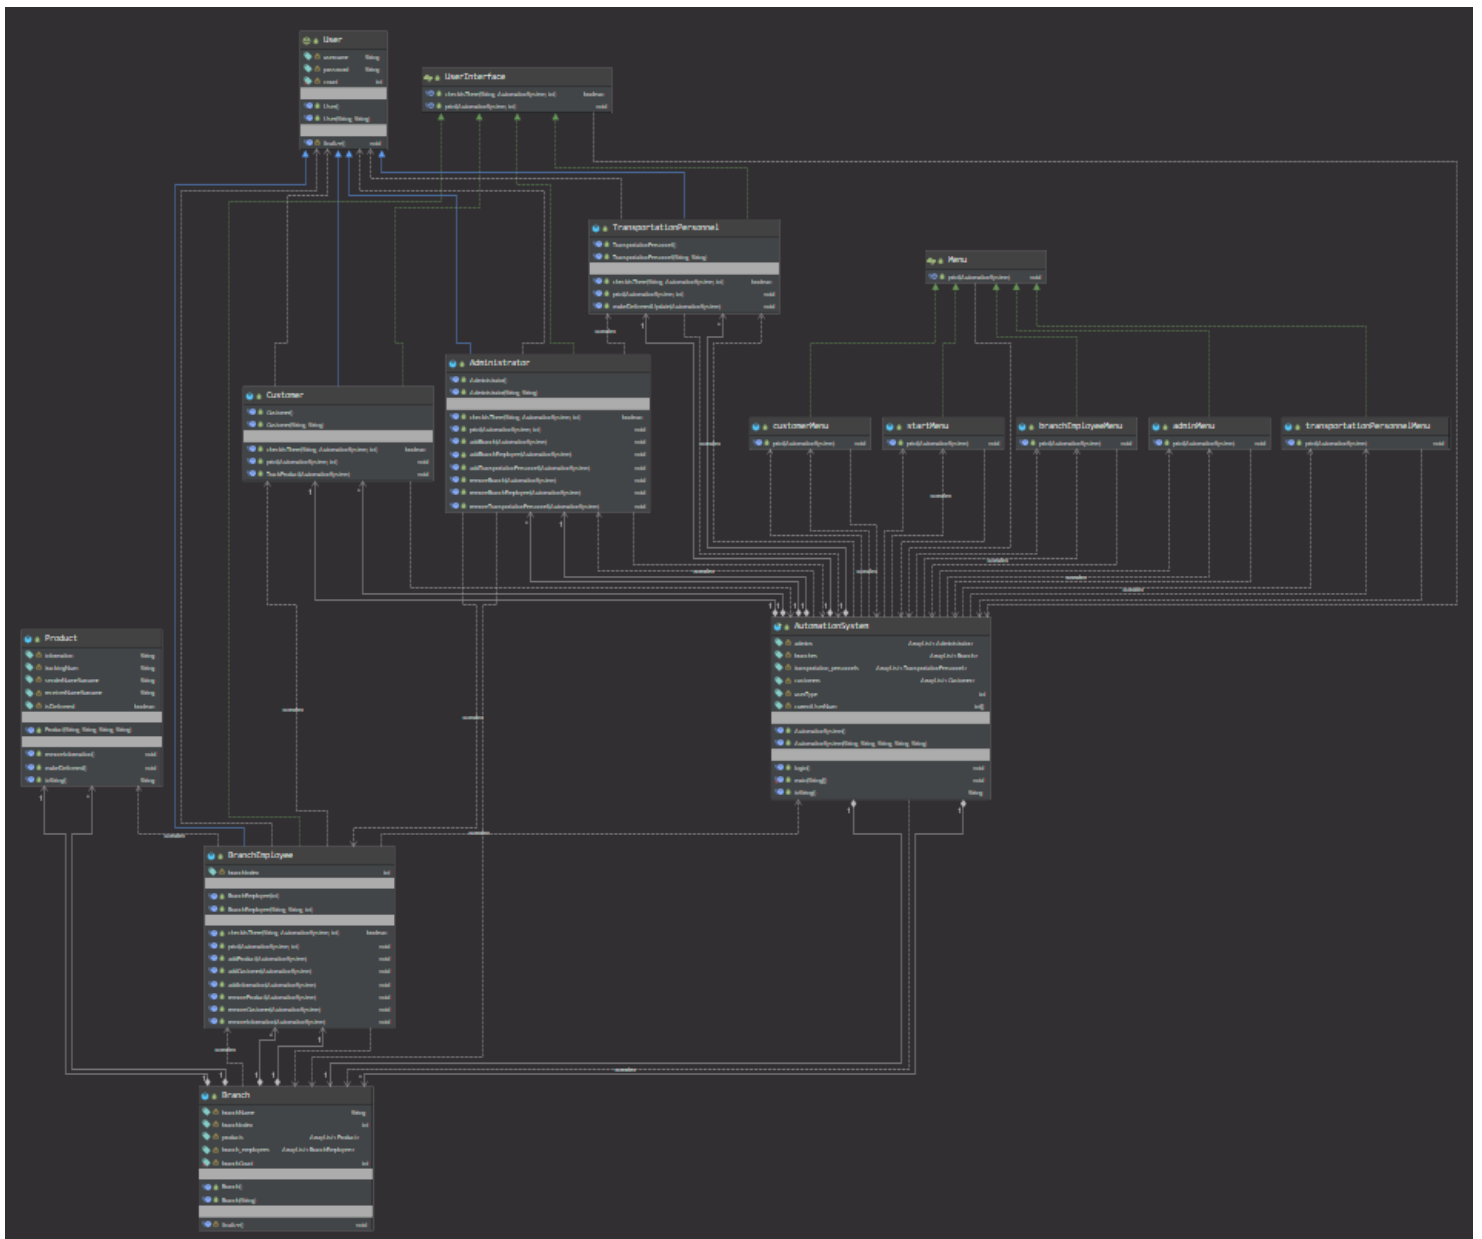

3-CLASS DIAGRAMS

Without showing dependencies:

With showing dependencies:

5-PROGRAM SOLUTION APPROACH

I tried to build a certain things to create a cargo automation system. The automation system includes Admins, Branches, Transportation Personnel and Customers. Branches include Branch members and Products.

In this system, administrators should have the authority to adding and removing branches, adding and removing transport personnel, adding and removing branch employees.

Branch employees should have the authority to adding and removing products, adding and removing customers, adding and removing information.

Transport personnel should have the authority to update the delivery information when they deliver the product.

I also extended the Admin, Transportation Personnel and Branch Employee classes from the 'user' class. In addition, these classes implement the 'UserInterface' interface.

The user class includes the user name and password fields. And other than that, they only have constructors.

The UserInterface has only 2 methods. One of them is the 'checkIsThere' function that checks if is there same string. Other is the 'print' method.

In addition, I created the 'Menu' interface. And I also created 'startMenu', 'adminMenu,' 'branchEmployeeMenu', 'transportationPersonnelMenu'. I have implemented the 'Menu' interface in these classes.

In the previous assignment, I did everything with Array. In this assignment, I did everything with ListArray.

When the system is opened, users can log in or log out. Also, I created the method of printing the system to see the system. And finally I used lots of try catch blocks in the system.

6-TEST CASES

```
A test system was created automatically.
**** START MENU ****
**** 1 - Login ****
**** 2 - Print the System ****
**** 3 - Add Admin ****
**** 4 - Exit ****
2
-Admin(s)
username: admin | password: 1234 (Automatically created)
-----
-Branch(es)
branch name: branch0 (Automatically created)
-----
-Branch Employee(s)
username: branch_employee1 | password: 1234 ( 0.branch ) (Automatically created)
-----
-Product(s)
-----
-Transportation Personnel(s)
username: transportation_personnel2 | password: 1234 (Automatically created)
-----
-Customer(s)

**** START MENU ****
**** 1 - Login ****
**** 2 - Print the System ****
**** 3 - Add Admin ****
**** 4 - Exit ****
```

```
